OCTARVIA-webの概要

- 船舶のライフサイクルにおける実海域性能を、燃費として評価するプログラムです
- webブラウザ上で動作します
- 船型データを入力として、波・風・斜航・当舵の外力を計算します
- 外力計算をベースに主機作動特性を考慮して実海域中の船速・燃料消費量を計算します
- 航路ごとの海象の寄与、往路・航路の積載状態の違い、経年劣化・クリーニングによる影響を考慮し、評価期間（ライフサイクル）における生涯燃料消費量を算出します
- 評価海象ごとのパワーカーブ、短期予測結果を波向・風向ごとに出力します

プログラムの起動

- **webブラウザ**（ Google chrome, Edge, Firefox） を起動します
- **海技研クラウド**（<https://cloud.nmri.go.jp/portal/pub/top>） にアクセスします
- Top 画面右上のボタンから**ログイン**します
- Top画面に戻り、右上の**アカウント名（メールアドレス）** をクリックします
- ご利用可能なクラウドサービス一覧から**OCTARVIA-web(Full version/Limited Version(Free))**を選び、クリックします

OCTARVIA_INPUT

Weather

Route

Item	Value	Unit	Remarks
Route type	Single	-	Supposed route type - Single: Single route for year around - Combination(route): combination of multiple routes
$\Delta\eta_o$	%	-	deterioration of propeller efficiency in open water
ΔSFC	%	-	increase of specific fuel consumption

Single route

Item	Value
Route	North Pacific
L-route	4900

Remarks

Item	Unit	Remarks
Route	-	St
L-route	NM	Le
Rate for routes and seasons	%	C
L-route	%	C

Reflect the routes

Conditions

ship type

Item	Value	Unit	Remarks
ship type	Container ship	-	Ship type to be selected from [Bulk carrier, Gas carrier, Tanker, Container ship, General cargo ship, Refrigerated cargo carrier, Combination carrier, LNG carrier, Ro-ro cargo ship (vehicle carrier), Ro-ro cargo ship, Ro-ro passenger ship, Cruise passenger ship having non-conventional propulsion]

Loading conditions

voy1

Item	Value	Unit
Amount of cargo for voy1	80000	ton
TEU for voy1	6500	TEU

voy2

☒ same condition with voy1 for performance simulator

Engine

INPUT for engine characteristics

Item	Value	Unit	Remarks
EC_{EO}	non	-	Evaluation condition for switching engine operation condition
isele	4	-	Selector of engine operating condition [1: constant revolution, 2: fuel index, 3: constant power, 4: constant ship speed]
V_{SC_voy1}	20	knot	Ship speed for voy1

Propeller

入力 : Route, weather (1/2)

■ Route type : 以下から選択

- ✓ Single : 代表航路 1 種類を選択
- ✓ Combination (route) : 各航路の寄与を % で入力
- ✓ Combination (route-season) : 各航路の季節ごとの寄与を % で入力
- ✓ Other : 海象の確率分布を直接設定

Parameters For Life-cycle Fuel Consumption Section

Mode

Item	Value	Unit	Remarks
ModeLAF	Linear model	-	Mode for the evaluation of aging and fouling - Linear model: Linear formulae are applied. (input of specific parameters) - Input: An arbitrary pattern for aging and fouling is used. (direct input of time and parameters in the right table.)

Specific parameters

Item	Value	Unit	Remarks
$p_{as}(R)$	0.3	%/year	Aging deterioration for hull (increase ratio due to aging of hull resistance)
$p_{ag}(SFC)$	0.1	%/year	Aging deterioration for engine governor (increase ratio of SFC)
$p_{fs}(R)$	0.5	%/year	Fouling deterioration for hull (increase ratio due to fouling of hull resistance)
$p_{fp}(\eta)$	0.4	%/year	Fouling deterioration for propeller (deterioration ratio of propeller efficiency in open water)
r_{pas}	0	%	Retrieval percentage on aging deterioration for a hull per cleaning interval
r_{pfs}	100	%	Retrieval percentage on fouling deterioration for a hull per cleaning interval
r_{pfp}	100	%	Retrieval percentage on fouling deterioration for a propeller per cleaning interval
T_{ch}	Combi. 2 and 3	year	Cleaning interval for hull (combination of 2 and 3 years or an arbitrary interval) (ΔT_{ch} must be a multiple number of ΔT_E .)
T_{cp}	Combi. 2 and 3	year	Cleaning interval for propeller (combination of 2 and 3 years or an arbitrary interval) (ΔT_{cp} must be a multiple number of ΔT_E .)
T_E	15	year	Evaluation period ($1 \leq T_E \leq 25$)
ΔT_E	1	year	Evaluation period ($0.25 \leq \Delta T_E \leq T_E$) Select from the dropdown list. (ΔT_E must divide ΔT_{ch} and ΔT_{cp} , and must be smaller than them.)

Fuel consumption per day [ton/day]

短期予測結果

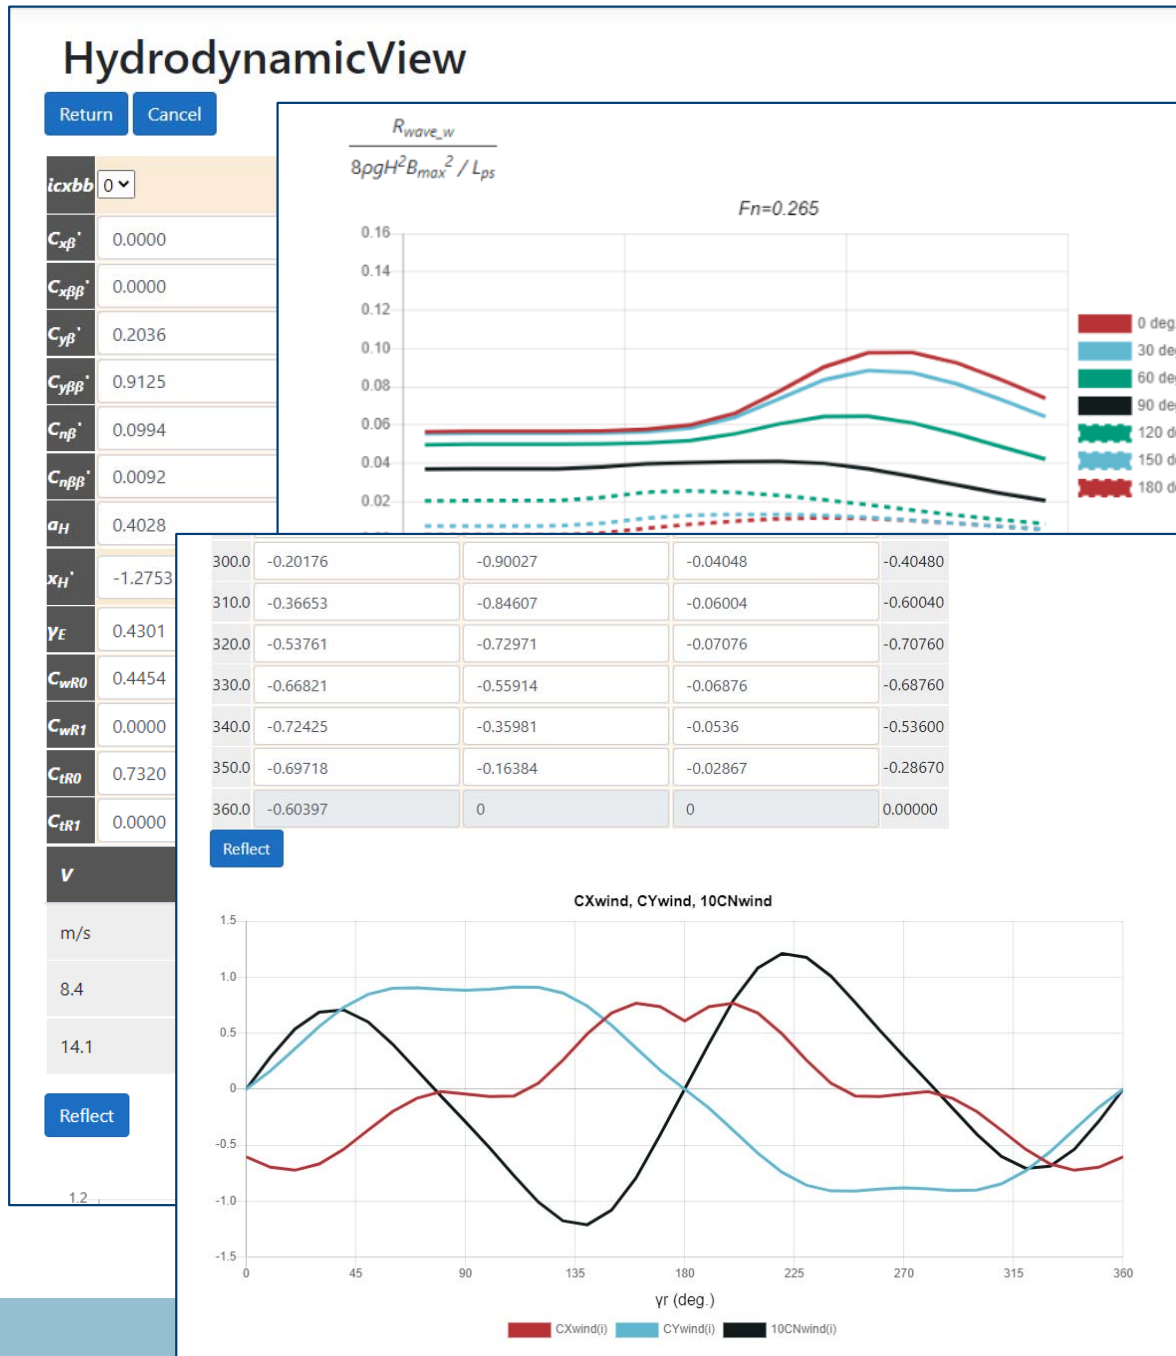

- ✓ 船速・1日当たりの燃料消費量
- ✓ 平水中及び評価海象（EC1~6）中を平均風向・主波向（30度刻み）ごとに出力

期待値（長期予測結果）

- ✓ 評価海象の確率分布と掛け合わせた値

トルクリミットを考慮した短期予測
→ 海象影響による自然減速、燃費変化の把握が可能

出力：中間出力（外力）

■外力推定結果

✓往路・復路の载荷状態ごと推定

- 波浪定常力（波浪中抵抗増加・定常横力・定常回頭モーメント）
- 風圧力係数
- 流体力微係数（斜航流体力・舵力）

物理モデルによる外力評価
→ 船型差の影響の考慮が可能

波、風、斜航、当舵の影響を推定
→ 要素ごとの分析が可能

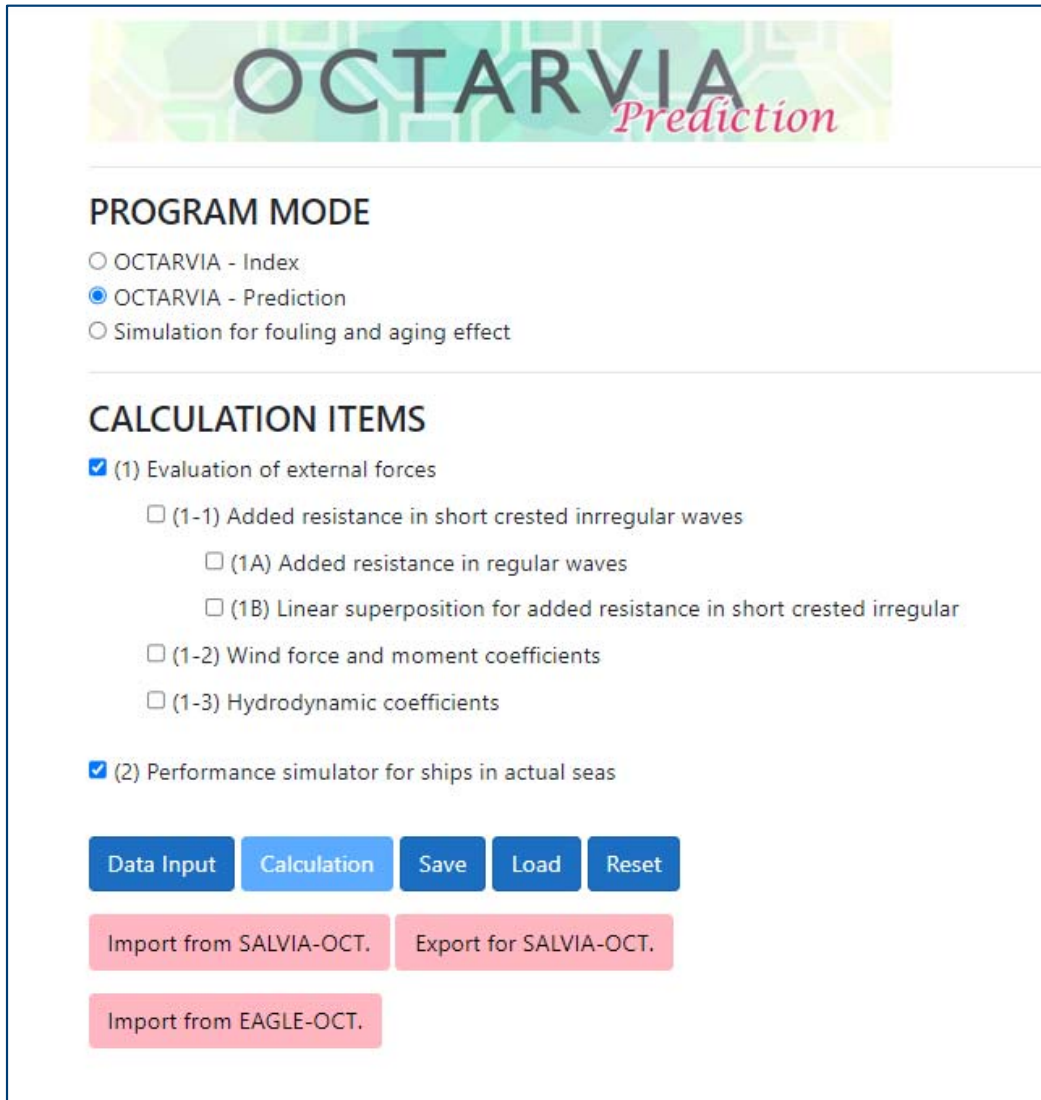

波浪中抵抗増加の影響で横波中の性能が変化
波より風の影響が卓越している
・・・など

Indexモードの機能

- OCTARVIA-web(Indexモード) は、実海域実船性能評価指標（ライフサイクル主機燃料消費量）を計算するプログラムです
- 航路・海象の影響、経年劣化の影響・クリーニング間隔の影響、船型による差、主機作動条件の設定を考慮して、ライフサイクル主機燃料消費量を算出することが可能です
- コストに直結するパラメータ（主機燃料消費量）で定量的評価を行うことで、設計データ（船型、平水中性能）の評価と同時にメンテナンス計画の最適化、減速の評価などの運航計画の最適化についても検討することができます

Predictionモード

プログラムの構成(Predictionモード)

The screenshot shows the OCTARVIA Prediction software interface. At the top, the logo 'OCTARVIA' is displayed in large blue letters, with 'Prediction' in red script below it. The interface is divided into two main sections: 'PROGRAM MODE' and 'CALCULATION ITEMS'. In the 'PROGRAM MODE' section, three radio buttons are present: 'OCTARVIA - Index', 'OCTARVIA - Prediction' (which is selected with a blue dot), and 'Simulation for fouling and aging effect'. The 'CALCULATION ITEMS' section contains two main checkboxes. The first, '(1) Evaluation of external forces', is checked and has four sub-items: '(1-1) Added resistance in short crested irregular waves' (checked), '(1A) Added resistance in regular waves', '(1B) Linear superposition for added resistance in short crested irregular', '(1-2) Wind force and moment coefficients', and '(1-3) Hydrodynamic coefficients'. The second checkbox, '(2) Performance simulator for ships in actual seas', is also checked. At the bottom, there are five blue buttons: 'Data Input', 'Calculation', 'Save', 'Load', and 'Reset'. Below these are three pink buttons: 'Import from SALVIA-OCT.', 'Export for SALVIA-OCT.', and 'Import from EAGLE-OCT.'.

The screenshot shows the OCTARVIA Prediction software interface. At the top, there is a header with the text "OCTARVIA" in large, bold, black letters, and "Prediction" in a smaller, red, italicized font below it. Below the header, there is a section titled "PROGRAM MODE" with three radio button options: "OCTARVIA - Index", "OCTARVIA - Prediction", and "Simulation for fouling and aging effect". The "Simulation for fouling and aging effect" option is selected. Below the radio buttons, there are five blue buttons labeled "Data Input", "Calculation", "Save", "Load", and "Reset".

Simulation for fouling and aging effectモードの機能

- OCTARVIA-web（Simulation for fouling and aging effectモード）は、**経年劣化・生物汚損による主機出力増加率**を算定するプログラムです
- **ドックインのタイミング**による影響、クリーニングインターバルごとの**経年劣化・生物汚損による性能悪化率・回復率**の設定を考慮して、主機出力増加率の評価が可能です

保存・入出力機能

Save/Load, Import, Export機能

OCTARVIA Index

PROGRAM MODE

☒ OCTARVIA - Index
☐ OCTARVIA - Prediction
☐ Simulation for fouling and aging effect

CALCULATION ITEMS

☒ (1) Evaluation of external forces

- ☐ (1-1) Added resistance in short crested irregular waves
 - ☐ (1A) Added resistance in regular waves
 - ☐ (1B) Linear superposition for added resistance in short crested irregular
- ☐ (1-2) Wind force and moment coefficients
- ☐ (1-3) Hydrodynamic coefficients

☒ (2) Evaluation of ship performance in actual seas and its changes

☒ (3) Lifecycle fuel consumption

Data Input **Calculation** **Save** **Load** **Clear**

Import from SALVIA-OCT.

Import from EAGLE-OCT.

■ Save/Load

- ✓ 入出力結果をJSONファイル形式で保存
- ✓ 計算前の入力のみでの状態でも可

■ Import

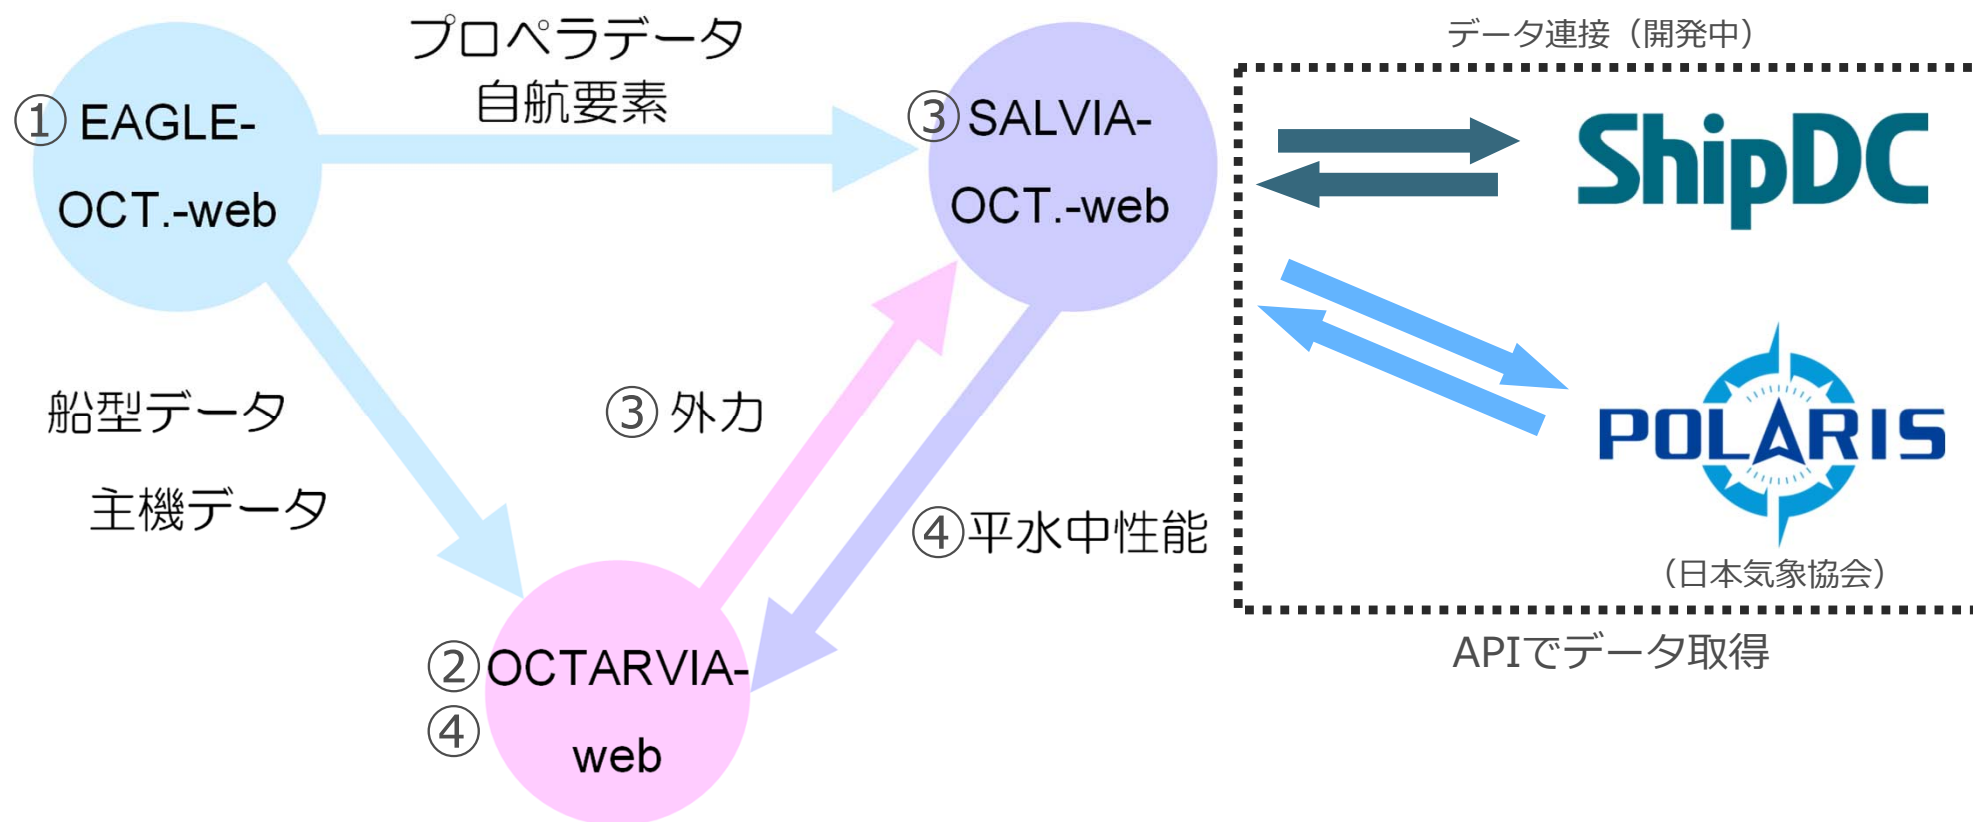

- ✓ EAGLE-OCT.による簡易推定結果が利用可能
 - 要目データ
 - 横断面形状パラメータ
 - 水線面形状
- ✓ SALVIA-OCT.による実船データ解析結果の利用が可能
 - 平水中抵抗
 - 平水中自航要素
 - プロペラ単独性能

■ Export

- ✓ 外力推定結果をSALVIA-OCT.の外乱修正で利用可能

他のアプリとの連携

他のアプリとの連携

アプリ間で連携することにより、以下が実行可能です。

- ① EAGLE-OCT.-webで船体形状、船体・プロペラ性能を推定
- ② 1の結果を用い、OCTARVA-webで、波、風による抵抗増加を計算
- ③ 1及び2の結果を用い、SALVIA-OCT.-webで、実船モニタリングデータ解析により平水中性能を評価
- ④ 1～3の結果を用い、OCTARVIA-webで任意海象での性能シミュレーション（船速、燃費）
